

Technical platform

What platform is best now and in the future?

It is important to choose the right platform that fits right now and can also handle your future needs.

Choosing the wrong system can create large unnecessary costs in the long run.

When we recommend a platform it is always on the basis of flexibility and what business goals we want to achieve.

What you get:

Definition of:

- Objectives, vision and purpose of the platform
- The needs now and in future phases (extranet and intranet)
- System and data flows
- Findings and recommendation of supplier and offers on:
- E-shop platform
- Economic-, storage- and logistics system as well as hosting
- Integrating e-shop and the ERP system
- Programming and methods
- License and ongoing operating costs

Your advantages:

- Choose the right system and platform from the beginning
- Ensure your needs now and in future
- Save resources with integration
- Optimize business processes
- Get an overview of your systems
- Achieve updated vital data in real time
